Preventing Infection

Avoiding contagious diseases like the common cold, strep throat, and the flu is important to everyone. Here are five easy things you can do to fight the spread of infection.

1. Clean your hands.
   - Use soap and warm water. Rub your hands really well for at least 15 seconds. Rub your palms, fingernails, in between your fingers, and the backs of your hands.
   - Or, if your hands do not look dirty, clean them with alcohol-based hand sanitizers. Rub the sanitizer all over your hands, especially under your nails and between your fingers, until your hands are dry.
   - Clean your hands before touching or eating food. Clean them after you use the bathroom, take out the trash, change a diaper, visit someone who is ill, or play with a pet.

2. Make sure health care providers clean their hands or wear gloves.
   - Health care providers should wear clean gloves when they perform tasks such as taking throat cultures, pulling teeth, taking blood, touching wounds or body fluids, and examining your mouth or private parts. Don’t be afraid to ask them if they should wear gloves.

3. Cover your mouth and nose.
   Many diseases are spread through sneezes and coughs. When you sneeze or cough, the germs can travel three feet or more. Cover your mouth and nose to prevent the spread of infection to others.
   - Use a tissue. Keep tissues handy at home, at work and in your pocket. Be sure to throw away used tissues and clean your hands after coughing or sneezing.
   - If you don’t have a tissue, cover your mouth and nose with the bend of your elbow or hands. If you use your hands, clean them right away.

4. If you are sick, avoid close contact with others.
   - If you are sick, stay away from other people or stay home. Don’t shake hands or touch others.
   - When you go for medical treatment, call ahead and ask if there’s anything you can do to avoid infecting people in the waiting room.

5. Get shots to avoid disease and fight the spread of infection.

Make sure that your vaccinations are current – even for adults. Check with your health care provider about shots you may need. Vaccinations are available to prevent these diseases:

- chickenpox
- mumps
- measles
- diphtheria
- tetanus (lock jaw)
- hepatitis
- shingles
- meningitis
- flu (influenza)
- whooping cough (pertussis)
- German measles (rubella)
- pneumonia
- human papillomavirus (HPV).
