

## Diet Guidelines After Fundoplication/Myotomy

This is a guide to help you eat and drink safely as you recover from Gastroesophageal Reflux Disease (GERD) or myotomy surgery. Some people may move into the next phase more slowly or more quickly than these guidelines show. This is OK.

Clear + Full Liquid Diet (1 to 6 days after surgery)		
Examples of what y	ou can eat and drink	Do not eat or drink
■ broth and blended soups	■ jello and pudding	■ bread
<ul><li>coffee (caffeine may make acid reflux worse)</li></ul>	soft fruit mashed with a fork	■ meat
■ cottage cheese	■ smooth hot cereals such as	■ raw vegetables ■ rice
■ crushed medicines	cream of wheat	■ carbonated drinks
■ ice cream	thinned out mashed potatoes	■ beverages through a straw
<ul> <li>milk shakes, protein shakes, smoothies (cold foods and drinks may cause spasms)</li> </ul>	■ yogurt	
Full Liquid Diet and Soft Food Diet (1 to 4 weeks after surgery)		
Examples of what you can eat and drink		
Examples of what y	ou can eat and drink	Do not eat or drink
■ some cooked vegetables	ou can eat and drink ■ ground meat	Do not eat or drink  ■ bread
■ some cooked vegetables	<ul><li>ground meat</li><li>soft casseroles</li><li>soups with chunks (you can</li></ul>	<ul><li>bread</li><li>large pieces of dry/solid meat</li><li>raw vegetables</li></ul>

## **Liquid Diet**

A liquid diet includes both clear and thick liquids, and smooth foods without chunks you need to chew.

## **Soft Food Diet**

A soft food diet includes anything that is soft in texture. The type of food is not important. For example, raw broccoli is hard, cooked broccoli is soft.

**Tip:** Before you eat, take several sips of water to wet your throat. Take small bites and chew well before swallowing. Eat small, frequent meals and stop eating before you get full.
