

What to Expect From Allina Health Home Hospital Care

A hospital alternative in your home

During Home Hospital Care

You will be on Home Hospital Care for 7 to 10 days. The exact time depends on your needs. You can expect:

- **biometric monitoring kit set-up:** An Allina Health representative will come to your home to set up your biometric monitoring. He or she will explain how to use the thermometer, oximeter, blood pressure cuff and tablet.
- **daily visits from a home health nurse:** Starting the day after you return to your home from the clinic, you will receive a visit each day from a Home Health nurse. The nurse will determine if you need any other services like physical therapy or Home Health aides.
- **daily virtual visit:** Starting your second day at home, you will have daily virtual visits with your Home Hospital Care provider using the tablet that came in your kit.
- **remote monitoring:** A nurse will check on your health remotely through your biometric monitoring kit. He or she will contact you if your any of your biometric readings (blood pressure, temperature, oxygen) are outside of normal ranges.

Call 651-635-9173 if you feel your condition is getting worse.
- **24/7 nurse phone line:** Talk to a nurse anytime by calling 651-635-9173.
- **technology support:** If you have any problems with your equipment, call tech support by using the button on your tablet, or by calling 612-246-3766.

After Home Hospital Care

- An Allina Health representative will pick up your biometrics monitoring kit 16 days after you start the program. A member of your Home Health team will tell you if you need to use the kit longer.
- Home Health team members will care for you until it is safe for you to discharge from Home Health in 4 to 6 weeks.

When to Call Home Health or 911
