

Guided Imagery

Guided Imagery

Guided imagery is a gentle but powerful technique that focuses and directs the imagination to ease stress and enhance well-being.

It uses words and images to help move your attention away from the worry, stress and pain. It helps you find your own inner strength and creativity to support healing. This brings the natural powers of your mind into health and healing.

How Guided Imagery Works

Guided imagery helps relax your body by reducing muscle tension and increasing positive emotions. This can help you:

- lower stress
- lower anxiety
- lower blood pressure
- you sleep better
- lower pain
- strengthen your immune system.

Benefits of Guided Imagery

Imagery has a positive affect on heart rate, blood pressure, breathing and oxygen rates, brain waves, temperature, and hormone balance.

Guided imagery can help relieve symptoms caused or made worse by stress, such as:

- chest pain (angina)
- high blood pressure
- high blood glucose
- headaches
- pain
- digestive problems
- breathing problems.

Guided Imagery in the Hospital

While you are in the hospital, guided imagery can help you:

- become calm and focused before, during and after a procedure or surgery
- have a temporary, mental escape at a stressful or difficult time
- lower pain and anxiety.

Guided Imagery at Home

After your hospital stay, you can buy relaxation or guided imagery CDs or downloads to use at home.

You can also create your own imagery by writing down a relaxing scene.

- Include images of yourself becoming healthier, stronger and more successful.
- Put on quiet music.
- Close your eyes.
- Relax and imagine your relaxing scene.

Whom to Call With Questions

Talk with your health care provider if you have questions.
